Manage Your ID Card Security System Better by Using HID Access Cards

The business world is being digitalized, and it means that we are given an option to use technology to our advantage. What is one common thing between all companies, big or small? It is the use of ID cards for identification, authentication, and data storage. With the innovation in portable card printers, it has become quite easy to produce any kind of badges in-house, which can save time and money.

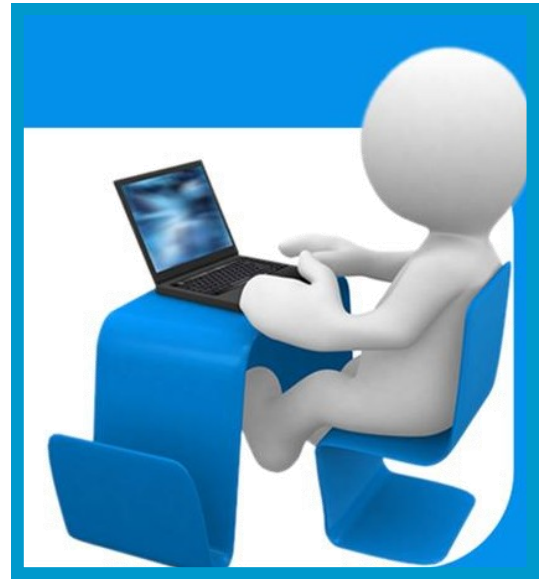

Manage Your ID Card Security System Better by Using HID Access Cards

These machines are not limited to simple designs; but can also handle the most complex type of cards, like [HID access cards](#). The availability of portable printing devices has made it easy to take care of any necessary upgrades needed to ID badges as well. With an in-house badge printer, a company can operate well within their set budget

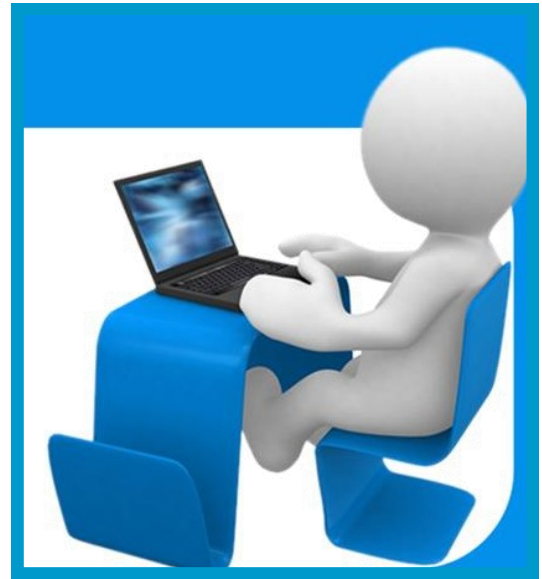

An upgrade from a simple photo ID to [HID access card](#) would mean a

Manage Your ID Card Security System Better by Using HID Access Cards

Better way of managing security inside the company's premises. Utilizing this card technology would allow the employees to be more efficient and productive. It would also provide better security without relying so much on manual inspection. It actually provides a second layer of protection that makes it easier for security personnel to do their work faster. Whenever people try to enter a secure door, the guards are not

focused on whether they have the necessary level of clearance to enter that door. They can let the machines do their thing while he or she can observe anything that is not right with the situation.

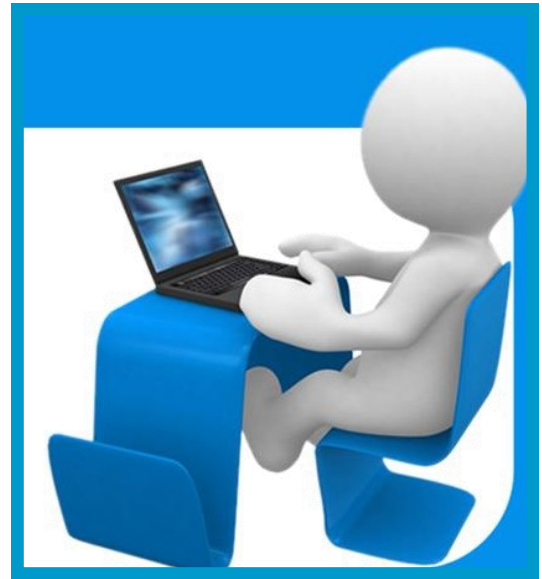

This small **HID access card** can open any locked door quickly and easily. The card is not the only element that can be used; but it is an essential key to the whole process. Every time you use it to

Manage Your ID Card Security System Better by Using HID Access Cards

gain access through any door or gate, a card reader is reading it. The card reader then transmits the information to a computer program in the access control database. If data matches what is in the database, access will be granted. **HID access cards** contain embedded data on that makes it possible for the reader to analyze. Due to innovations in card technology, this analysis takes only a few seconds.

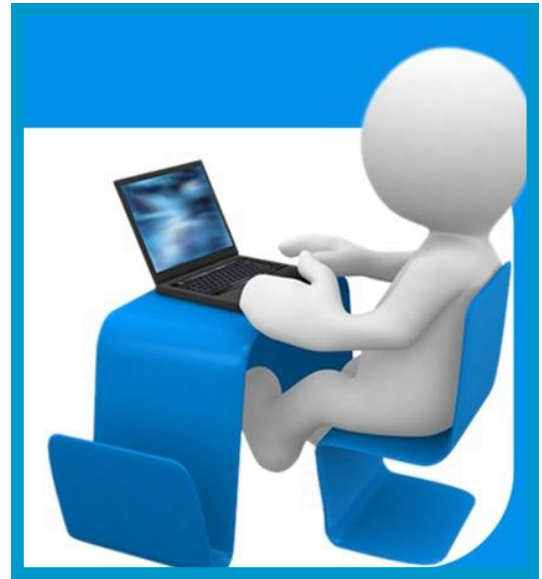

Manage Your ID Card Security System Better by Using HID Access Cards

As you can see, this results in a huge time difference as compared to manually checking badges.

This unique system also provides an option for the company to schedule times as to when the cards can be used. For instance, you can arrange that no one can gain entry to your office during weekends except for those specifically authorized. You can easily set up

limitations that keep each employee in the areas where they need access; and only those areas. Instead of having security personnel in every single area 24/7, you can provide a lockdown with a few clicks on the computer. Some companies install a security camera along with the card reader in every door of the company.

An **HID access card** system is highly efficient because you can easily make

security changes from the main control panel. You can enable or disable the power of cards even without getting them from the users. This system also provides management a record of who went in and out of the premises at any date and time. Even instances where access was denied are recorded. You will have the power to know what is going on with your company even if you are not there
